

Food Corporation of India — System Walkthrough

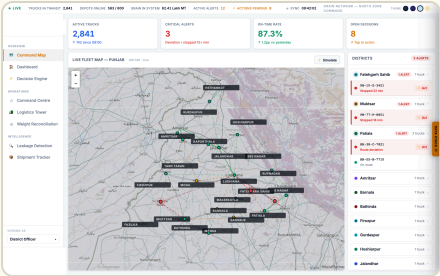

One page · approx. 10–12 minutes
Confirm connectivity before the meeting begins

FCI

Foodgrain Supply Chain Monitoring Dashboard

Operations monitoring prototype

00:00

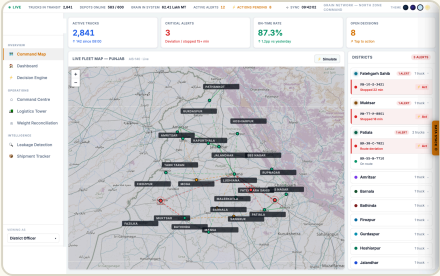

Onboarding → select District Officer

National figures: 62.4L MT tracked, 2,841 trucks, ₹4.2 Cr leakage.

"This is the scale under monitoring — every truck, every depot, in one view."

01:30

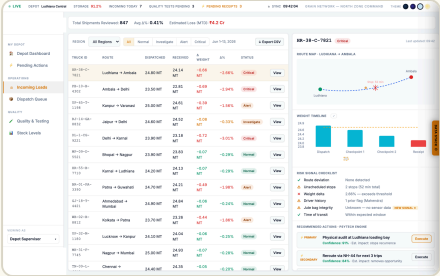

Command Centre

Zone health grid, grain-flow pipeline, live alert feed.

"From procurement to beneficiary, this shows exactly where grain is at present."

03:30

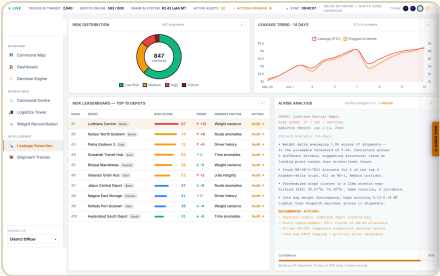

Switch role → Depot Supervisor

Show weight/bag reconciliation on an incoming load.

"This is the point at which bag substitution or weight discrepancy is identified — at the point of receipt."

05:30

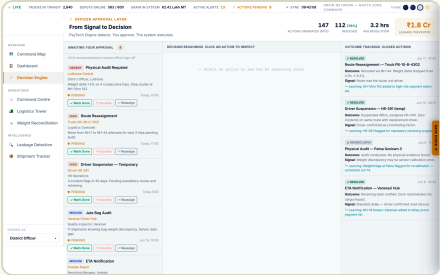

Leakage Detection module

Open the Weight Variance pattern card — ₹2.1 Cr, 88% confidence, 47 shipments.

"This is not a single flagged shipment — it is a recurring pattern across 47 shipments on one route."

07:30

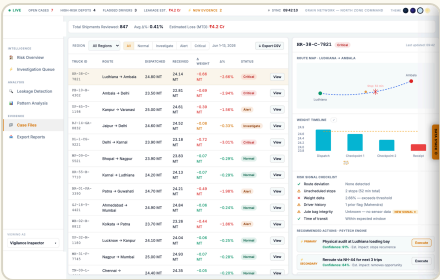

Decision Engine

Show a recommended action with evidence and alternatives considered.

"The system recommends a course of action; an officer reviews and signs off before anything is executed."

09:30

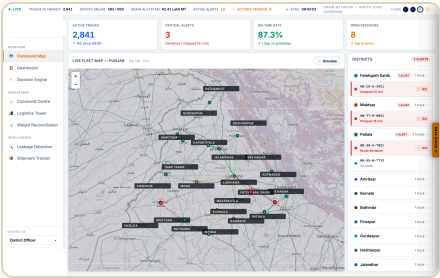

Switch role → Vigilance Inspector

Open a case file — evidence chain, past case with FIR filed and ₹12L recovered.

"This is the record retained should a case proceed to enforcement."

11:00

Close

Return to Command Centre.

"This is a working prototype — every screen shown can be examined further on request."

If connectivity is unavailable: the demonstration runs fully offline once the page has loaded — load it before entering the venue.

If asked whether this is live data: state clearly that the figures shown are illustrative, demonstrating how real data would be surfaced. Refer to the capability document for deployment requirements.
